

THE NEW FENDI ISHINE GRADIENT EDITION

A hint of mystery and sophisticated appeal

The new Fendi IShine Gradient Edition explores the facets of femininity thanks to its refined gradient colored dial adorned with a mother-of-pearl mosaic and distinguished by an elegant interplay of subtle nuances of black, grey and brown.

Charming and magnetic, the Fendi IShine Gradient Edition features a gradient colored dial embellished with a hand-crafted Florentine mosaic mother-of-pearl center emphasizing the chromatic effect. Delicately juxtaposed, the mother-of-pearl gives additional radiance to the dial. A sophisticated palette of colors ranging from deep black to warm brown recalls the light of sunrays, from sunset to dusk.

The Fendi IShine Gradient Edition maintains the distinctive feature of this iconic collection: the patented rotating gemstones mechanism allows to reveal a new set of semi-precious stones on the dial by turning the crown at 3 o'clock. Three gemstones configurations lit-up the dial according to the wearer's selection: 12 white topazes, 12 gradient pink and red topazes or 12 black spinels.

The concave and convex case of the timepiece delicately merges with the two-tone or stainless-steel bracelet with alternation of polished and satin-brushed finishes celebrating the innovative and sophisticated spirit of the Fendi IShine collection.

Hypnotic yet versatile, the Fendi IShine Gradient Edition embodies a perfect balance between ultimate refinement and daring creativity.
