

## Spring-Summer 2023 Collection

### F-80 SKELETON

**Innovation moves the hands of Ferragamo's iconic watches  
made with responsible materials.**

One of Ferragamo's best-selling watch collections, **F-80 Skeleton** unveils an exclusive new look that reflects the brand's vision of sustainability and its commitment to researching and using innovative materials with a low environmental impact.

Just a few months after the launch of the **F-80 Skeleton with Sustainable Strap**, presented during *World Ocean Month 2022*, Ferragamo again revisits this unisex model, produced using two responsible materials for the timepiece's main components.

The 41 mm case is made using a composite material including 60% ceramic powder from natural minerals and 40% nylon with 63% bio-based content from renewable sources. Bracelet made using TPU that includes 39% bio-based content.

The two models' monochromatic colour scheme recalls natural elements, featuring Amaretto inspired by earthy colours and Navy Blue, conjuring up the ocean depths.

The two screws at 6 and 12 o'clock - the hallmark of all F-80 models - are IP Rose Gold. The automatic movement – another aspect of a sustainable approach that aims to limit energy consumption - can be seen through the transparent case back and the skeleton dial with *sunray* finish, while the luminous hands and indexes add highlights to the solid colours.

The **F-80 Skeleton** automatic watches will be available from March 2023 in Ferragamo boutiques, on [ferragamo.com](https://www.ferragamo.com) and at selected authorized retailers.
